

3. EXTERNAL CSS

Make a different CSS file with the .css suffix.

Using the <link> element in the <head> section, link this file to your HTML text.

Larger projects are advised to use this technique since it keeps the display (CSS) and structure (HTML) distinct, which makes the code easier to

```
<!DOCTYPE html>
<html>
<head>
  <title>My Website</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <p>This is a paragraph with external styles.</p>
</body>
</html>
```
